Refer & Earn - Solution Overview

Friends join through a shared link. No code to type. Rewards reach the wallet automatically after the new person's first ride.

Existing rider / driver
Shares their personal link from the app

New rider / driver
Opens the link, installs the app and signs up

Mobile apps
Rider app and driver app show the link, history and rewards

Admin team
Switches the program on and sets the reward

The customer journey

1 Share
The member taps Share and sends a personal referral link by WhatsApp or SMS.

2 Open
The friend opens the link. The platform remembers who invited them.

3 Install
The friend is taken to the app store and installs the app.

4 Sign up
On sign-up the platform links the friend to the inviter automatically.

5 First ride
When the friend completes their first ride, the reward is credited to the wallet.

What the platform does behind the scenes

Link and tracking
Creates each member's personal link.
Records every link opening and ties it to the sign-up.

Referral records
Keeps who invited whom, the status of each referral and the full history shown in the app.

Reward engine
Checks the admin's rules and pays the right amount once the first ride is done.

Wallet
Credits the reward to the rider or driver wallet and shows it in their wallet history.

What the admin can control
Turn the program on or off, separately for riders and drivers.
Choose who earns: the inviter only, or the inviter and the new person.
Choose when the reward is paid: after the first ride, or after a set number of rides.
Set the reward amount.
See every reward in the wallet history.

Built-in safeguards
Rewards are paid only after a real completed ride, never at sign-up.
Each referral is rewarded once, even if the same request arrives twice.
People cannot refer themselves, and a person keeps their first inviter.
Links expire after a set period (7 days by default).
If a credit fails, it is retried automatically and no sign-up is blocked.
Older code-based referrals keep working during the transition.
